

## **Mathematics in Further Education Colleges supported by the Maths Hubs**

Having worked with mathematics departments in Further Education (FE) Colleges for many years, the teachers in these institutions have always considered themselves to be the 'forgotten ones'. There were very few courses specifically aimed at the needs of teachers in FE. Often they had to 'piggy-back' GCSE courses aimed at teachers in secondary schools if they were to receive any support at all.

This has changed with the advent of the Further Education Mastery Specialist Programme (FEMS). The two year course is designed to meet the needs of teachers in Further Education Colleges. The course is an opportunity to work with experts in the field and teachers in similar situations to you. The course not only shares techniques and resources but aims to change the culture around mathematics in FE colleges and provides you with the skills to share your knowledge with colleagues in your college.

The aim is to recruit an FE mastery specialist in every FE college in the country. If you would like to know more about this fully funded opportunity and express an interest in doing the course click [here](#).
